Hybrid Daylilies

The Finest Summer Blooming Perennial Plant

We again take pleasure in offering to gardeners everywhere our select list of finest new daylily (hemerocallis) hybrids. Daylilies bloom from spring to fall with the height of bloom in July and August when border flowers are scarce. They come in almost all the colors of the rainbow, and in delightful blended and bicolored patterns. Stems vary from 18" dwarfs up to 5' giants. It is not uncommon to have fifty or more buds on a single stem in the new hybrid forms.

Anyone can grow daylilies. They thrive in any type of soil, in sun or part shade, and increase in size and beauty each year. An established plant may have a thousand flowers during the season. They require no fussing or special feeding, and repay even a little attention with a wealth of lovely flowers. Perhaps their one requirement is a little extra watering at bloom time if the season is dry. We send complete planting and growing directions with every order.

If you have not yet grown these new flowers you are missing a garden treat. Start off with one of our introductory garden collections, and when you have seen the new colors and types, you can then select others to your liking. If you enjoy exchanging experiences with other gardeners, join the Hemerocallis Society. Dues of \$3.00 bring you fine newsletters and the attractive yearbook. We offer an extra plant, worth \$2.00 or more, to any new member who sends his application to us with an order.
